

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): A light device comprising:

(a) a light source comprising at least one light emitting diode (LED), and to generate a majority of output light in a primary direction toward a front of the light device;

(b) a lens device through which the light generated from said light source passes; and

(c) ~~a collection optics~~ optical unit to capture a portion of the light generated from said light source and having a light output surface at a side of the light device, and to output the captured light in a direction other than the primary direction toward the side of the light device,

wherein said lens further reflects a portion of the light generated from said light source, and said collection optical unit further captures the reflected portion of the light generated from said light source, and outputs that captured reflected light in the direction other than the primary direction.

Claim 2 (Canceled).

Claim 3 (Currently Amended): A light device according to claim ~~[[2]]~~ 1, wherein said collection ~~optics~~ optical unit (c) comprises (c1) a light pipe with (c2) a collecting surface and (c3) ~~[[an]]~~ the light output surface.

Claim 4 (Currently Amended): A light device according to claim 3, wherein the ~~collection~~ collecting surface (c2) of the light pipe comprises a plurality of prism elements.

Claim 5 (Previously Presented): A light device according to claim 3, further comprising:

(d) a sleeve configured to hold said light pipe, and wherein an air gap is provided between said sleeve and said light pipe.

Claim 6 (Currently Amended): A light device according to claim [[2]] 1, wherein said lens device (b) comprises (b1) an inner lens and (b2) an outer lens.

Claim 7 (Currently Amended): A light device comprising:

(a) light source means for generating a majority of light in a primary direction toward a front of the light device;

(b) lens means through which the light generated from said light source means passes; and

(c) collection means for capturing a portion of the light generated from said light source means and having a light output surface at a side of the light device, and for outputting the captured light in a direction other than the primary direction toward the side of the light device;

wherein said lens means further reflects a portion of the light generated from said light source means, and said collection means further captures the reflected portion of the light generated from said light source means, and outputs that captured reflected light in the direction other than the primary direction.

Claim 8 (Canceled).

Claim 9 (Currently Amended): A light device according to claim [[8]] 7, wherein said collection means (c) comprises (c1) light pipe means with (c2) a collecting surface means and (c3) [[an]] the light output surface ~~means~~.

Claim 10 (Currently Amended): A light device according to claim 9, wherein said ~~collection~~ collecting surface means (c2) of the light pipe means comprises a plurality of prism means.

Claim 11 (Previously Presented): A light device according to claim 9, further comprising:

(d) holding means for holding said light pipe means with an air gap provided between said holding means and said light pipe means.

Claim 12 (Currently Amended): A light device according to claim [[8]] 7, wherein said lens means (b) comprises (b1) an inner lens means and (b2) an outer lens means.

Claim 13 (Currently Amended): A light device comprising:

(a) a light source comprising at least one light emitting diode (LED), and to generate light in a primary direction toward a front of the light device;

(b) a lens device through which the light generated from said light source passes, and said lens device further reflecting a portion of the light generated from said light source; and

(c) a collection optics-optical unit to capture the reflected portion of the light generated from said light source and having a light output surface at a side of the light device, and to output the captured reflected light in a direction other than the primary direction toward the side of the light device.

Claim 14 (Currently Amended): A light device according to claim 13, wherein said collection ~~optics~~ optical unit (c) comprises (c1) a light pipe with (c2) a collecting surface and (c3) ~~an the light~~ output surface.

Claim 15 (Currently Amended): A light device according to claim 14, wherein said ~~collection~~ collecting surface (c2) of the light pipe comprises a plurality of prism elements.

Claim 16 (Previously Presented): A light device according to claim 14, further comprising:

(d) a sleeve configured to hold said light pipe, and wherein an air gap is provided between said sleeve and said light pipe.

Claim 17 (Original): A light device according to claim 13, wherein said lens device (b) comprises (b1) an inner lens and (b2) an outer lens.

Claim 18 (Currently Amended): A light device comprising:

(a) light source means for generating light in a primary direction toward a front of the light device;

(b) lens means through which the light generated from said light source means passes, and said lens means for further reflecting a portion of the light generated from said light source means; and

(c) collection means for capturing the reflected portion of the light generated from said light source means and having a light output surface at a side of the light device, and for

outputting the captured reflected light in a direction other than the primary direction toward the side of the light device.

Claim 19 (Currently Amended): A light device according to claim 18, wherein said collection means (c) comprises (c1) light pipe means with (c2) a collecting surface means and (c3) ~~[[an]]~~ the light output surface ~~means~~.

Claim 20 (Currently Amended): A light device according to claim 19, wherein said ~~collection~~ collecting surface means (c2) of the light pipe means comprises a plurality of prism means.

Claim 21 (Previously Presented): A light device according to claim 19, further comprising:

(d) holding means for holding said light pipe means with an air gap provided between said holding means and said light pipe means.

Claim 22 (Original): A light device according to claim 18, wherein said lens means (b) comprises (b1) an inner lens means and (b2) an outer lens means.
